Kamehameha was born on a stormy night at Kohala in Hawaiʻi, on the island of Hawaiʻi. Exactly when he was born is not known. It may have been in November. For November is the month of rain, thunder and lightning.

A bright star with a long tail appeared during Kamehameha’s birth. That kind of star is a comet. Astronomers know that Halley’s comet was seen in 1758. It is probable that Kamehameha was born in November 1758.
